What I need to do is pass an integer from one function to another. A: Here is another solution which actually has the advantage of passing the "target" int to Function2, rather than just the value of x: void MainFunction() { int x = 0; int y = Function1(x); // y will equal 1 Function2(x,y); } void Function1(int x) { x++; // you could do something here with y } void Function2(int x, int y) { y++; } A: You can pass the int using ref keyword: void MainFunction() { int x = 0; ref int fX = ref Function1(x); // x will be 1, and you can change it here } void Function1(ref int x) { x++; } // // Generated by class-dump 3.5 (64 bit) (Debug version compiled Oct 25 2017 03:49:04). // // class-dump is Copyright (C) 1997-1998, 2000-2001, 2004-2015 by Steve Nygard. // #import @class TPopUpButton; @interface TPopUpButtonViewController : NSViewController { TPopUpButton *_button; }
