This guide was last updated in September 2019 and includes new and existing features, functions, and application programming interfaces (APIs) added since then. Before AutoCAD was introduced in 1982, commercial CAD programs ran on mainframe computers or minicomputers. CAD operator (user) used a graphics terminal and a "plotter" to control the graphics on the display screen. AutoCAD is available as desktop, mobile, and web apps. Editor user interface AutoCAD LT and AutoCAD share a consistent user interface, including a radial menu, toolbars, menus, and dialogs. The toolbars and menus are customizable and an object's position on the screen can be assigned. The user interface toolbars for AutoCAD LT and AutoCAD have been completely redesigned for AutoCAD LT 2012. AutoCAD LT 2014 introduced a new user interface, which has a panel-based approach, rather than toolbars and menus. The user interface is similar in look and feel to other CAD software products available on the market. To open the interface, press the F2 key or click the AutoCAD logo in the upper-left corner of the screen. In the newest version (2014) of AutoCAD, you can download and use the new UI, which has a panel-based approach, instead of toolbars and menus. AutoCAD LT has many enhancements to the drawing area, including a snap tool, which aligns an object automatically. The application provides a consistent look-and-feel for creating drawings and settings. AutoCAD LT's drawing area includes a select tool, which allows the user to make changes to a specific part of a drawing area. In addition, the drawing area includes a ruler, an option to resize an image to fit the space and snap tools, which are located in the drawing area's bottom right corner. The icon bar is the toolbar on the left side of the screen.

When importing feedback into AutoCAD, new features ensure that changes are detected and added back into the file. Automatic keypoint alignment: Automatically align the user's mouse cursor when the user moves the cursor over keypoints on paper. (video: 1:03 min.) You can now tell your project manager to "Enable automatic keypoint alignment." This feature ensures that the axes are aligned with the keypoints. You don't have to manually align axes again and again after each review. Automatic measuring device calibration: Automatically recalibrate measurement devices based on the new measurement methods. This includes calibration of survey instruments, string and tape measures, laser levels, and extrusion levels. (video: 1:47 min.) You can now tell your project manager to "Enable automatic measurement device calibration." This feature ensures that your survey and laser level are calibrated correctly based on the new measurement methods. New specifications for importing PNG image: The specifications for importing PNG images are now more accurate. You no longer need to ensure that all specifications match. (video: 1:37 min.) You can now tell your project manager to "Import images with PNG specifications". With this feature, the specification type will always match the actual file type, no matter how the file was created. Improvements in printing from graphic tablets: Bevel the edges of your pen so that you can get more distance for your strokes. Quickly learn which setting to use with the user interface. Improvements in printing from the computer: Bevel the edges of your pen so that you can get more distance for your strokes. Work on multiple AutoCAD files. Easily add annotations to parts of your drawings. Add symbols for your annotations and be more productive. Scan multiple layers at once. Export multiple viewports at once. Improvements in importing files from other systems: Import the full path of the file, including the filename, extension, and path. Import all drawings and text in a file. Auto-detect and import layer IDs of files that were exported from other CAD applications. Support for drawing on the cloud. Access online Help from the web browser.
