in dairy cows in the dry period. This study aimed to investigate the effects of body condition and seasonal change on milk production, milk composition and serum hormones in dairy cows in the dry period. A total of 132 cows were divided into three groups; control (n=44), fat cows (n=44) and thin cows (n=44). Each group was sub-divided into two groups: summer (n=22) and winter (n=22). The body condition, milk production, blood and milk samples were examined.

In summer, the body condition score and serum growth hormone (GH) concentration increased in both fat cows and thin cows compared with those in the control cows (p<0.05). The Best Tree Service Company In Jacksonville, FL Tree Service Jacksonville Florida Tree and Trimming Services Our tree and
