In-hospital mortality after acute myocardial infarction. In the past decade, our understanding of the molecular pathogenesis of cardiac disease has advanced considerably, and, like all new research, many exciting findings have been published. By following the ICD-10 classification, diagnosis and treatment were integrated in the health care system by the 8th ICD-. There is, however, need to evaluate critically the quality of classified data. “Two patients with chronic kidney disease who underwent renal transplantation did not have biochemical evidence of prior HTN. However, they both experienced persistence or new onset of T2DM within 2-3 months after transplantation. Thus the diagnosis of new T2DM after renal transplantation should be based not only on the clinical presentation, but also on the abnormalities of renal-type glomerular filtration marker and kidney disease history. These two patients might be previously undiagnosed diabetic patients.” By following the nosologia basica integral pdf, ICD-10 classification, immunosuppressants which were regarded as the principal drugs were gradually changed to other anti-rejection drugs such as corticosteroids, calcineurin inhibitors, mycophenolate mofetil, or mTOR inhibitors, and treatment strategies have gradually changed.
