Check for the updates, these are always small and that may help your issue. MyCayman You should always search for the latest version first, before you download and install. Hi, Did you ever think of including information about Active/Suppressed programs on this website? If you know of programs that can be run from the registry, or programs that run into the background, but do not use up system resources and just sit there idle the impact of their running can be disastrous. I would think that there are a lot of people out there who would not know that they have a program running, let alone that there is a program that can bring that program into session, so that we can close it. I know you may not be able to do this, but it would make your website more useful and have a lot more people using it for what it is intended for, as opposed to what it is not. I just installed the tweetoo and for whatever reason, it does not want to post my status on twitter - it shows that I have a pending tweet and it is not posting, but for some reason it is not posting it. Any help? I dont think you can post them unless you have twitters account. Have you tried using the website support area to send a request to Twitter? I know it's a bit hard to figure out what to tell them but they should be able to help. Hi

Twitteroo [Mac/Win]

Use Twitteroo to update Twitter status from your desktop. Tweet your thoughts, photos, jokes, etc. with one-click. Automatic daily changes ensure that you will never miss a moment.
