Photoshop's complex user interface allows the user to work with multiple layers that allow edits to be applied to an image in step fashion. Photographers manipulate background and foreground images separately. The version of Photoshop CS6 that ships with Windows 8 supports the Windows Start screen, so users can work with multiple documents at once. Photoshop has long been the tool of choice for editing photos and graphics, and the company continues to evolve the program to make it better. The program offers a range of features, tools, and capabilities, and offers much more than cropping, rotating, and straightening photos. It can accomplish the same tasks as other software programs, but it offers a lot more features and capabilities, too. Photoshop is a nondestructive editing tool. If there is a conflict between conflicting edits, Photoshop will attempt to display an error message or flag that it needs to be resolved. You can simply move on to another step without having to worry about losing something. The program provides versatile tools for designers to create customized images for the Web, for instance, using web templates that allow them to save significant time compared to starting from scratch. Photoshop utilizes layers, which are new in the CS6 release, and when you work with a photo or graphic in Photoshop, there are multiple pieces of information. This is how you can have a single image be composed of different parts. Layers create a level of transparency to the image, and when one layer is done editing, you can lay over it a new layer or multiple layers. Multiple layers can be edited at once in Photoshop. It makes it easy to fade, blur, sharpen, or create other changes in the image, and these edits are stacked on top of the original. What's New in Photoshop CS6: Enhanced Content-Aware Tools The content-aware tools are at the heart of a new feature, Content-Aware Fill. This tool takes into account the content of an image so that it applies the best-fit fill in areas of the image that look like it has a certain content, such as a person, object, or area of the image that looks like a book or text. It can be used to fill in the background or an area that is different, such as a white background with a yellow background. It's also a great way to fill in a missing person or object in an image. Although, as is the case with any content-aware tool, it

Q: Why does this find_or_create_by function fail? I am trying to make a name search field, but I'm having trouble making it work. I'm fairly new to Ruby, so this is probably a dumb question. The find_or_create_by function fails. def search @searches = Search.where("name like?", "%#{params[:search]}%") if params[:search]="" @search = @searches.find_or_create_by(name: params[:search]) @searches.reset_column_information end render :json => @search end Any help would be appreciated. A: You need to add a.all after where so that it will return all the records where @searches.where(...) will return all the records. Also you have to be careful with SQL Injection. @search = @searches.where("name like?", "%#{params[:search]}%").all.find_or_create_by(name: params[:search]) @searches.reset_column_information EDIT: Change it to: @search = @searches.where("name like?", "%#{params[:search]}%").all.find_or_create_by(name: params[:search]) @searches.reset_column_information // Copyright (C) 2003-2004 Jeremy B. What's New In Adobe Photoshop CS3?

The Earth Museum in Menlo Park boasts a "discovery center" full of huge models like Life-size, a 715-foot-long representation of the San Andreas Fault. But this summer the museum is suspending its earthquake programs and offering fewer visitors as it wrestles with its own earthquake safety policies. Most of the tourists who wander through the museum are not aware of the earthquake safety precautions, said Bill Fagan, a geologist and senior research specialist at the museum who oversees its earthquake exhibit. The museum has three exhibits — a street outside its entrance, an exhibit room and a three-story exhibit tower — that describe the force of the earth's most powerful earthquake, the 1906 San Francisco-to-San Jose quake. A large model of a section of the San Andreas fault lies on the museum's street. Now, the museum is taking a step back from its central theme. Visitors will not see the models or a show of 7,000 crumpled newspapers that represents how much destruction and cleanup was caused by the quake. "We've really got to fight over the next two months to get our house in order," said Fagan, who said the museum's earthquake exhibit is suffering from funding cuts in its state earthquake program. The earthquake safety policy is not just about safety, he said, but about ensuring that visitors are informed about the dangers of being near an earthquake fault. "When you're within three miles [5 kilometers] of a fault, there is a possibility that a large earthquake could happen," Fagan said. "What we really need to focus on is to make sure that visitors understand that." The museum began suspending its earthquake programs this summer because of budget cuts in the state-run California Earthquake Authority, which provides earthquake education programs for the museum, which opened in 1956. The authority's budget has dropped about \$2 million in recent years, Fagan said. The museum has stopped regular summer programs but will let tourists take a free tour of the damage done by the 1906 quake. And it will still have an annual display of crumpled newspapers at Halloween. Alaska-based World of Kinks, which creates earthquake-themed songs, will perform at the museum Oct. 10-11 to promote the California Earthquake Authority's Ready for the Big One educational program. The museum also hired a former
