What's New in the?

This new feature enables you to import any text, image, or vector layer as a simple editable shape, add it to a drawing, and quickly see the changes in your AutoCAD drawing. You can even edit the imported shape from a digital table, as shown in the following video. When you import a line, circle, or text box, your drawing becomes editable, and you can add text or insert symbols into it. The drawing becomes live and you can easily edit the shape. You can import the text, symbol, or shape directly from a file or from a web page using the Shared Components feature. With the Markup Assist feature, you can review all the changes and suggest edits to the imported text, symbol, or shape. If changes are approved, your drawing will automatically incorporate the changes and save the latest version in your drawing.

Drawing Tools You can create and edit symbols by using the new drawing tools. These tools are immediately available in any drawing. In addition to these new drawing tools, you can edit the display settings for tooltips, status messages, and hyperlinks to the navigation bar. You can also modify the setting for the grid and pen color, and select the drawing modes. You can even customize the keyboard shortcuts for toolbars, shortcuts, and other commands.

Viewport Enhancements You can customize how the viewports appear in AutoCAD. You can now choose the grid type, grid color, and scale and zoom automatically based on the size of your current viewport. You can also use the viewports to draw arcs and define their shapes. For example, you can define an angle or radius. When you use the Customize Viewports feature, you can also change the grid color, grid type, and scale and zoom for the side viewports, as well as modify the grid and pen color.

Performance Enhancements You can now batch delete multiple objects in a drawing. By default, all objects in a drawing are deleted whenever you edit or open the drawing. This can make it difficult to open a drawing if it contains many objects. In this release, you can now delete multiple objects at once. You can press Delete key while selecting the objects you want to delete. The objects are deleted as soon as you press the Delete key. You can also select multiple objects to move or copy them at once. Pressing Shift+F3 while selecting multiple objects will
