Autodesk's move to commercialize its software in the 1980s brought it to the attention of graphic arts, architecture and engineering professionals. One of the company's major products, AutoCAD, was in high demand for architects, engineers, industrial designers, and builders who had not previously had software for designing blueprints, plans, and drawings. In 1993, George Pake, Autodesk's director of engineering, stated, "We found that CAD was being used in the construction industry... so it became very apparent that this was going to be a new growth industry." In 2002, Autodesk acquired Ansys, an engineering simulation software company, to fill its needs in software for structural, thermal, and mechanical engineering. In 2007, Autodesk bought Portland-based Web AIM, a web technology company, for \$120 million, and a year later they purchased UGS, a virtual engineering company.
