Step 1: Launch Autocad Open Autocad, and then add your Key.txt file to the given path " C:\Users\YOU\AutoCAD\Default" Q: Blocking words from MS SQL Server with EF Core I have entities with many to many relationships. Entities are: Items, Categories, Properties. This is the code of the Relationships(join table) public class PropertyCategory { [Key] public int PropertyCategoryId { get; set; } public string CategoryName { get; set; } public List Properties { get; set; } } public class PropertyItem { [Key] public int PropertyItemId { get; set; } public string ItemName { get; set; } public int PropertyCategoryId { get; set; } public PropertyCategory Category { get; set; } } I want to prevent users from inserting specific words in PropertyCategoryName or ItemName when the PropertyCategoryId or ItemId is -1 (not yet created) I tried to create method with a Where clause (with a list of words) and it works in SQL Server SQL SELECT \* FROM [dbo].[Categories] WHERE Name NOT IN ('Column1','Column2','Column3') AND [PropertyCategoryId] = -1 Code var words = "column1,column2,column3"; db.Database.ExecuteSqlCommandAsync(\$"SELECT \* FROM [dbo].[Categories] WHERE Name NOT IN (N'{words}') AND [PropertyCategoryId] = -1;"); But when I add it to my EF Core model with using EF Core, I cannot use dynamic statement (not allowed) so I tried to add the where clause to my query in the OnModelCreating method and use ToString method Here is the code of the Entity [StringLength(100)] public string Name { get; set; } public int CategoryId { get; set; }
