Adopted by the NSP on August 1, 1999, the Green River Cutting was in place to increase the safety of theA number of biological methods for detection or identification

of microorganisms are known in the art. One such method is immunoassay using an antigen-antibody interaction. Thus, for instance, the interaction of specific antibodies and antigens can be used for identifying microorganisms to which the antigens belong. A number of challenges are faced in the implementation of immunoassays, including, but not limited to, the difficulty of standardizing and/or simplifying the assay, the level of sensitivity and specificity that is achievable, the speed with which antigen-antibody reactions can be conducted, the need to employ relatively complex and costly equipment, and the unreliability of the

resulting results. Other important limitations are outlined in the discussion of individual assays below. A. Immunoassay for detection of Staphyl e79caf774b
