Windows client—AutoCAD can be used in Windows and Mac environments using the AutoCAD LT and AutoCAD 2008 and newer, respectively. AutoCAD LT and AutoCAD 2008 had a "compatibility mode" with AutoCAD R2012 and R2010. AutoCAD LT has a limited ability to import and export DXF files. Web client—Autodesk offers an online AutoCAD application for individual use or as a hosted service. JavaScript client—Autodesk's client side JavaScript API was introduced in AutoCAD 2013. Mobile applications—AutoCAD Mobile allows both iOS and Android applications, however AutoCAD Mobile does not support all of AutoCAD's drawing functionality, AutoCAD Mobile does not support DXF import or export. AutoCAD Mobile was originally limited to editing a drawing, however AutoCAD Mobile 2011.5 (released in December 2011) introduced the ability to create a building plan (floor plan, section plan) from a drawing. AutoCAD Mobile for iOS/Android does not support DXF import or export. There are thousands of AutoCAD plugins available on the Autodesk Exchange apps platform. Various third-party companies sell AutoCAD add-ons for PC, Mac and Android. History AutoCAD's history goes back to 1981, when it was called Freelance. It was designed to be a graphics tool for architects, engineers, drafters, and 3D modellers. At that time, the use of 3D information was limited to mere drafting, and the only CAD tools available were the hardcopy 2D CAD tools of that time. As the use of 3D increased, AutoCAD was redesigned to use 3D CAD techniques. The new AutoCAD was designed with a simplified approach to 3D, with 3D techniques designed to be usable by the average user, rather than the professional CAD users of that time. In the early 1990s, AutoCAD was enhanced to include a versioning and revision control system. In 1992, AutoCAD's top-of-line, professional version was released, introducing powerful modelling features, such as commands for creating topology and layout. This was followed by AutoCAD for Construction Design in 1994. AutoCAD LT was released in 1998. AutoCAD LT is available for Windows and Macintosh, and incorporates many of the features of AutoCAD for construction design, but without the 3D modelling features ca3bfb1094

As long as drug companies can sell unapproved, unproven medications, health insurance plans are going to be reluctant to pay for them. This is something that self-insured, privately insured companies don't have to worry about because they are big enough to absorb any losses. But everyone else has to worry about it. So a week ago, I explained how the FDA, under the leadership of Andrew von Eschenbach, has gone nuts. Under the FDA's new rules, drugs that cost less than \$500,000, for example, cannot receive priority review, but drugs that cost more than \$2 million get priority review. That's crazy because it has two terrible effects: 1. High-cost drugs do not get pushed through the process as quickly as low-cost drugs because FDA reviewers are now more focused on the drugs' financial returns rather than their scientific advances. 2. Insurance companies get scared of paying for drugs that don't work. Before, drug companies could rely on the big money of the most profitable drugs. But now, the FDA is trying to prevent even very successful drugs from getting approved by limiting the number of physicians who can buy the drug and the number of tests that can be done with it. Of course, I am over-simplifying things. The new rules don't work in practice in the same way that they do not work in theory. They are more complex and nuanced than that. But that is the basic idea, and the basic underlying principle. But back to the crazy. The FDA went to the media, and revealed that it can't find any evidence to back up its claim that aggressive drugs have been proven to be safe and effective. If you think about it, you know what the evidence really is: 1. The
