Why is that happening? I have included "System.Data.dll" in the references. A: It looks like OleDbConnection is a managed library, not a static library. I found this from the compiler output: c:\Windows\Microsoft.NET\Framework\v4.0.30319\System.Data.dll : Error : Could not load file or assembly 'System.Data, Version=2.0.0.

While this sounds like a short sentence, it actually means a lot: How do you think blockchain is going to develop in the future? How do you think blockchain will contribute to our society? How do you think blockchain will influence us? First things first. We start with the basics of what blockchain is and what we think of when we hear this word. We are sure that you have already heard this from your very own financial institution, from a friend or even from your own personal mailbox. All in all, we are pretty sure we can do a good job describing it, so here we go: An immutable and decentralized technology for the verification of the transactions of value. These three

characteristics make the blockchain the perfect tool for the implementation of the Autonomous Society. It is decentral and decentralized because there is no single person responsible for the security and integrity of the transactions. Transaction authenticity, you might say, is a such an extensive and expensive process that it is not wise to trust a single company to keep these records. The blockchain is the perfect solution for this. In theory, the blockchain cannot be corrupted as every node runs the same process, and the participants are recorded in an unchangeable system that can be verified at any moment. These records are immutable, meaning they are unchangeable, unmodifiable, and can not be erased. This has great implications 6d1f23a050
