A sensitive method for the determination of in situ sugar spin labels in proteins in real time is presented. The new reagent 2-Ipyridin-1-yl-2,3-diazabicyclo[2.2.1]heptane hydrochloride dihydrochloride (IPD-07) was employed to spin label sucrose, lactose, trehalose, glucose, N-acetylglucosamine, and N-acetylmannosamine in whole acid-soluble thylakoid membranes and in spinach thylakoid membranes in the presence of NaBH4. EPR spectra recorded on aqueous solutions showed the presence of short-lived free radicals, and the line shapes resembled those of previously investigated spin-labeled molecules. The trapped radicals were practically stable under conditions used for enzymatic degradation. Chemical degradation was more pronounced for labeled molecules in isolated thylakoid membranes.Q: Logout issue While Logout mechanism is working fine in my application, when i click on logout button my account on facebook wall appears and then suddenly it disappears.
