
HACK Nero Reloaded V6.6.0.15 Super Pack - By Redlion

Successful an exploit could allow an attacker to reboot a vulnerable device, resulting in a DoS condition. Note. To exploit this vulnerability using .NET Framework 2.0, an attacker must be able to run code on a system that is not installed on the device after it is downloaded and installed. To download files using a browser, an attacker must be able to enter a URL into the address bar of a web browser, which will allow him to access the computer after downloading. In this case, a hacker could execute commands that exploit the vulnerability and reboot the affected device into a DoS state.
