

Suddenly high quality audio has reached the masses - or has it? If we feed track 33 from the Sound Check 2 CD - and this is a 1 kHz tone with a -14 dB FS level, or 14 dB. And we feed the 1 kHz tone from the -14 dB FS level, while the level will be lowered. Then after a time, about 4 seconds, we feed the signal again at 14 dB FS level, and downgrade it again. The call sounds wrong somehow. If you want to figure out what that means, think of your phone call talking to you - and you're talking to him on the phone, for example. Then you say, "Hi," or "How are you?" and he replies: "Good, and you?"

[Extra Quality] Alan Parsons - Sound Check 2: Audio Test And Demonstration CD (2003)
