(first activity: onCreate -> displayfragment -> displayfragment(again)) edittext searchedittext = (edittext) findViewById(r.id.edittext1); string search = searchedittext.getText().toString(); intent intent=new intent(getApplicationContext(), displayfragment.class); intent.putExtra("search", search); startActivity(intent); (second activity: onCreate -> displayfragment -> displayfragment(again)) textview greetingtextview = (textview) findViewById(r.greeting); string welcome = getIntent().getStringExtra("search"); greetingtextview.setText(welcome); (first activity: onclicklistener -> displayfragment -> displayfragment(again)) button buttonsearch = (button) findViewById(r.buttonsearch); buttonsearch.setOnClickListener(new view.OnClickListener() { @Override public void onClick(View v) { string searchText = (edittext) findViewById(r.edittext1); string welcometext = (textview) findViewById(r.greeting); welcometext.setText(searchText); } }); please let me know why am i getting null value. a: this happens because the button is in the viewgroup that is behind the one that contains the edittext. then when you click the button you touch the edittext so you get the string from it. try to add viewgroup to the layout to see if it works. (it should) let me know. q: php - count number of occurrences of character in a string i need to count the number of occurrences of a specific character within a string. example: in "hello world!" the number of occurrences of "o" would be 2. 5ec8ef588b
