Portable wxPython for people on the go. It's a simple, portable and compact python distribution (version 2.7.13), that's includes support for wxPython, wxGTK and wxGTK2. wxGTK2 is the port to wxPython of the GTK+ 2 library. The official PyGTK distribution supports version 2.8 and above, but the compatibility with wxPython is restricted to a minimum of Python 2.4. wxPython 2.7.x and wxGTK 2.8.0 support Python 2.6 and Python 2.5. So wxPython is about twice as fast and that's why we decided to release this version. The alternative to wxPython 2.7.x is PyGTK 3.0. wxPython 2.7.8 comes with the wxGTK 2.8.0 and it is 100% compatible with the 2.7.8 version. Note: There are several versions of wxPython, wxPython-X.X and wxPython-GTK-X.X. This is the 'X.X' version which is compatible with the wxPython 2.8 and which includes the wxPython extension. For the wxGTK version, we have the 1.X.X version. wxPython-GTK-X.X and wxPython-GTK-1.X.X are also available in the Extras section. @AzimuthDynamics, thanks for the response. I've been looking for something like this for quite a while. I've been using an external program to compress my collection of pictures, then email them off to myself, but after several years I've had enough of waiting for the picture to load and the program to quit. I'm not trying to convert anyone to "using" computers - there are plenty of people out there who really like having computers, so the main point of this article is to inform people like that... I just saw the 2.8.0 version of wxPython, but since it says it's not for Windows, I was wondering if the 2.8.0 package has any of the advantages of wxPython for Windows? Great job on the new version of wxPytho. I'm now trying to get a smaller install because I've noticed it takes a lot more disk space to

## What's New in the?

- Portable wxPackJPG is an easy-to-use, easy-to-use application that compresses your JPEG images to save disk space and makes it easy to send your pictures via email. - You can specify a number of compression settings and even set the exact location where the files will be saved. - The application can verify the integrity of the output files. - The program also supports bitmap transparency, single/dual background/foreground color, tiling mode and more... Portable wxPackJPG Screenshots: Portable wxPackJPG - User's review: Good compression. Good app. Good explanation of how to use it. Portable wxPackJPG - PortableApps.com forum review: Looks like a good solution for archiving images to email but is there any way to compress on the fly or does the size of the original image determine the compression? Portable wxPackJPG - SourceForge.net review: It appears to be a good program, as I'm able to compress my own images. I haven't used it on an image yet, but I think that the manual compression would be unnecessary. Also, having an explanation is really good, as most of my own images are so poorly-compressed they were barely readable. Portable wxPackJPG - x4FReviews: Works for me. It compresses images and stores them at a location of your choosing, with options to specify compression settings. It appears to be in beta though. Portable wxPackJPG - macosxhints: This program makes it easy to compress your pictures, and allows you to do it on-the-fly if you want. It will take a selection of pictures and compress them to a new location. If you want to compress multiple files this way, you'll need to use another program, but that's not a problem. Overall, it's pretty easy to use and it's a great way to compress images quickly. Portable wxPackJPG - VectorDeck: Portable

wxPackJPG - PortableApps.com forum review: Compresses images using one of several compression algorithms. Specify your desired image quality by choosing either a "Quality" (Low, Standard, or High) or a Percentage (0% to 100%). The default compression is set to Standard, but you can choose either Low or High quality. Portable wxPackJPG - VectorDeck: Portable wxPackJPG - SourceForge.net review: It's a good compression utility that will let you do more than just compress and it's easy to use. It will prompt you for a filename when you start it up, and
