Thank you for the review! I have 4.3 and 5. Accordingly, I just made a backup (4.3) and converted (5) back to 4.3. The conversion is fast (about 30 min), but made me lose a number of settings. That is: the work around for viewing working processed images was often with LR5 (it is currently with 4.3), in which I could not open the Post Processing window. Besides, all the settings stored in one project were also broken, but I could fix that. Some Import and Export settings also were missing. Converting to 4.3 also was a bit more tricky: I had to adjust the settings back to use LR4.3 (I had about 200 images to upload), and for some folders I had to remove the.lrcache files. (See for details where and how I removed those back in 4.3.) I'll do an update in the next few days when I have time. My files are still open in 4.3, and I can edit them (using a cloud copy). The new Import Artboard feature enables you to add artboards and text boxes to a PSD document. This handy new feature replaces the Artboard Add Layer option. You can reposition artboards and text boxes, if you choose, and you can edit out the artboards and text boxes when you're satisfied with the final results. Artboards and text boxes are added and managed just as normal layers. Photoshop is a very rich image editing and asset creation tool that comes with dozens of tools for virtually any task. Its strong point is comping and image editing. It also has a wealth of tools for both pre- and post-production.
