The basic interface is much like it would be on a greater machine, with the exception of 3D, which crashes from, well, pretty much everything I've tried. There are so many tools that seem to be stuck in the Dark Ages, that I'm not even sure if these tools are still around, no matter how useful they could be. I think of the Ansel tool as a prime example. It captures a series of images at different focal length. The problem is that Photoshop doesn't support FPX files and all of the rule of thirds grid tools are at the community level. As mentioned, OneDrive, Dropbox, and Google Drive exist for those who prefer these destinations. But, because of the cloud feature's limitations, I rarely use them. I'd rather have one image only than get into the habit of downloading multiple images to the desktop. But that's the only thing that I don't like about modern Photoshop. The basic editing experience is still the same, just as it is strong as ever. If you want to try a version of Photoshop that emphasizes speed - and comes in at an unbeatable price while still gaining most of Photoshop's functions - the iPad Pro is the perfect companion. The iPad Pro is a worthy companion to the PS. I like the idea of the iPad Pro as a secondary editing platform, as it makes sense. But I still think that the iPhone Pro and the 6s are more suitable for the basic editing task. I don't have an actual iPad Pro, but that's okay. I know what I want to do with Photoshop and I can edit images on my iPhone. I can import my files from my Lightning import cable or from the memory card slot as well. But I can't do that on my

MacBook Pro at this point.
