The most exciting thing that Adobe did with Lightroom 5 was to turn its traditional interface and workflow on its head. Instead of adding extra controls or syncing up with its desktop and mobile apps, Lightroom instead focused on making all of its tools behave more like you'd expect – a drag-and-drop workflow that feels more like Photoshop than the previous version of Lightroom. You can also do much of your defining and editing work in the free Lightroom mobile app, which is especially useful when you're shooting on the go. Lightroom offers a ton of features and functions to help make your life as a photographer easier. It offers full image editing, you can easily organize your imagery and add metadata, editing options are well-thought out for any kind of shot, and even when Lightroom isn't needed, it's still got some power and features that you might not find in other apps. Compared to most every other editing application we've reviewed thus far, the upgrade to Lightroom 5 doesn't add a ton of bells and whistles to the mix – but it does make one of the best photo editing applications even better. When it comes to long-run development, the Adobe Cloud APIs represent a new generation of tools. They make it easy to build, deploy, and manage sophisticated web solutions, while creating a tighter connection between applications and the user's experience. The following are some of the new services. Soon to be released includes many more. Image Retouching. On successful completion of the CleanUp layer, the selected retouching tools are enabled for the image. The retouched image is immediately reflected on the new layer above, and a new layer dialog box appears for further retouching. These layers are co-processed in Photoshop, meaning that if the user performs a retouching action, it is reflected instantly on the other layers, and vice versa. Photoshop's capabilities for image editing are scalable to the Cloud, and the Cloud is scalable to the desktop. Image Editing. The Photoshop Cloud APIs enable users to embed image editing tools, such as the Retouch tools, on their websites. Once the tool is embedded, Photoshop customers can access an image's layers and retouch the image within their web sites. Workflow Blueprints. Customers can create a workflow blueprint and then add workflows to their website. They can then access the workflows from several Internet-connected devices, including smartphones and tablets. Image Search. The Cloud APIs are used to offer sophisticated search services to customers. Image search provides sophisticated image analysis and indexes, offering suggestions and results relating to images stored in the Cloud.
