I have to admit right from the start that Photoshop has been my program of choice for processing digital photos since I bought my first copy for PC back in the late seventies. It is probably the only piece of software I have been using for the last twenty-five years or so in some form or another. I have been forced to give up my use of Adobe Photoshop from time to time when new software catches my eye, but I am glad to still be able to show my respect to this program. It has been particularly difficult over the last few years as annual releases have seemingly dried up and there has not been a new version for three years. An Adobe Creative Cloud subscription was added up on Lightroom 5, bringing with it Lightroom mobile and adding a couple of new photo editing abilities, including Adobe's own video editing tools that work well in mobile. When the beta version of Lightroom was released for public beta, a lot of people went crazy over the new look, with very few problems. This improved the customer experience so much that I was amazed at how much I had missed. In this article, I'll review the Lightroom 5 beta and review the new features added in that release. I will also point out the shortcomings that may affect your decision to purchase the program now or hold back until Lightroom 6 rolls around in late April. The big new addition in Lightroom 5 is the ability to edit video, so I've been using the beta version to create little videos on my iPhone. It's simple, once you know a few simple things and you have become a pro. One of the first things I had to figure out was how to make an object in the video appear in the foreground of the scene and not in the background. That is one of the reasons that I upgraded to the beta version. In the beta version, there wasn't nearly as much to see, but it did recognize that I would be interested in discovering how to do this and it showed me how to do that.

Adobe Photoshop has packed many new features. To start with, it can read files from the new Dropbox website, saving it to the cloud and allowing the users to access files from virtually any computer. Users are finding new ways to create and edit images with new features that Adobe Photoshop provided in 2014. The new version of Photoshop makes the overall performance of Adobe Photoshop 2018 faster. Also, the performance of the new version is 60% better than the previous version with the same settings. Also, the feature Intelligent Edge Refinement lets you use inward and outward edges of the object accurately. Adobe Photoshop users can now use features of the cloud-based auto-complete, such as Autosuggest. With Autosuggest, a user can quickly type text within a document, and instantly see suggestions for the characters or words already used. Users can now also use Autosuggest through QuickType UI. Users can also now more easily access their personal cloud storage. The personal cloud storage feature was launched with the release of Photoshop CS 1.0 in 1992. The process provides users with easy access to personal cloud storage with a sign in screen that automatically accesses their different cloud accounts. A new feature is the Photoshop Match Color. This feature lets the user learn the colors of various items, so that when they select a color, it is not applied to the image. Adobe says that the new feature makes it easier to use textures for design purposes. A new feature is also a Define Regions utility, that is, it lets the users set a rectangular cursor on a photo and because it is a selection, the users can add text and crop features. Likewise, the new Mask Guide feature lets the users check where the user can crop the canvas with the grid.
